

WATER TREATMENT

**Softens the toughest water.
Puts the suds back into hard water
De-scales plumbing and equipment
Corrects most salinity problems
Can stop corrosion
Stops Iron staining
Kills algae
Makes hard water drinkable
Improves all stock water
Boosts plant growth**

FLUID TREATMENT

**STOPS DIESEL BLACK SMOKE
CUTS ENGINE EMISSIONS BY UP TO 85%
CLEANS FUEL SYSTEMS
IMPROVES PERFORMANCE AND
ECONOMY IN VEHICLES IN MANY CASES,
PARTICULARLY OLDER VEHICLES
STOPS SCUM AND SCALING IN PIPES OF
ALL FLUIDS
CANNOT WEAR OUT
EASY FIT
PERFORMANCE GUARANTEE
10 YEAR GUARANTEE**

FLUID REACTOR

**MAGNETIC FLUID TREATMENT
TREATS ALL GASSES AND LIQUIDS**

**DEVELOPED BY WATER QUALITY
SPECIALISTS IN AUSTRALIA**

**EXTREMELY POWERFUL
VERY HIGH PERFORMANCE
PERMANENT-PORTABLE - AFFORDABLE**

Aquarius Drilling Services

Water Bore Construction - Pump Installation - Irrigation - Water Treatment

Factory 28, no 94-102 Keys Rd.

Moorabbin Vic 3189

What is Magnetic Conditioning?

Using free magnetic energy to condition any fluid or gas for improved performance of that gas or fluid.

How does this occur?

A very powerful south-pole magnet is placed over a pipe carrying fluid and the energy from that magnet is induced into the passing fluid and held there as it moves on.

Using a special process called Negative Diffusing Action only contained in the Australian built Fluid Reactor, the very focused and powerful positive energy, from only the magnetic south-pole, without north pole interference, successfully inducts all the power into the passing fluid or gas.

This new potential substantially alters the behaviour of the molecular nature of the passing fluid. In the case of water, a number of things occur.

Molecular change

This electrical activity prevents calcium from forming as a hardness crystal along with magnesium by making the oxygen molecules un-available to either hardness ion in the water.

This absolutely prevents scale from naturally occurring as calcium carbonate, as calcium cannot reach the oxygen molecules necessary to form this compound.

What effect does this have?

The reactor will remove existing scale build-up from all plumbing equipment by re-dissolving the scale back to solution. It releases the oxygen molecules from the calcium carbonate and makes the water more oxygen enriched.

Calcium and magnesium both become ions again and thus both are more available for use, not to cause the usual damage with staining, blocking up pipes and fittings. It also prevents salinity! See information sheet.

Softening

The magnetic action also magnetically locks the molecular behaviour of the fluid, lowering the surface tension, creating a further softening effect.

Magnetic lock!

Like blocks in a box, the minature poles of a water molecule, are changed by strengthening the natural molecules positive charge. This causes a greater attraction to the opposites (north). The poles lock and remain locked and the surface tension on the water drops as there is no further molecular movement.

Magnetic condition offers a number of changes

The magnetic lock occurs and together with the DC voltage induction both change the behaviour of every fluid or gas being treated.

Test and Taste change

These changes will cause a pH change in some water supplies, depending on the molecular make up and also taste change must follow. Other changes also occur. These can be seen by test.

Installation?

This is the next critical step. Although the Fluid Reactor is extremely powerful and very well developed, both installation and knowledge of the water supply being treated are both important.

Trained technicians

It is essential that trained technicians install Reactors.

Why?

- The need to pre-test most water supplies.
- The setting up for installation.
- The post-test procedure that must be applied.
- Performance can then be guaranteed

How long do the units last?

Virtually forever. (Ten year manufacturers warranty is given)

Maintenance?

No maintenance ever.

Performance guarantee

When the installation is successfully completed and tested, provided that it is not interfered with and the water quality does not alter, there is no reason, once results are gained that a performance guarantee cannot be given.

What we can offer what many others already enjoy!

Magnetic conditioning is not new and has been around for over 70 years, but.

- ✓ The new Fluid Reactor has the sheer power ,
- ✓ The simplest, smallest and most advanced technology,
- ✓ The unique installation and test technique
- ✓ Is highly portable and compact
- ✓ Tough and well built to last
- ✓ An extremely low-cost and very effective solution
